PROFESSIONAL SUMMARY

Maritime workforce operations professional who builds the systems the department runs on. Twelve projects delivered across compliance, crew travel, procurement, dispatch, service requests and workforce forecasting — built on Microsoft 365 and Excel/VBA with no development team, no new licences and no pause in operations. Recent work is in applied AI: an email-to-ticket system with model-assisted triage, and a Copilot Studio agent in Microsoft Teams answering live crewing questions, grounded on tool queries rather than indexed documents. Nine years with the same marine services operator, from deck seaman to Senior Administrator, accountable for 300+ multinational seafarers across 25+ vessels, MLC 2006 compliance and the annual crewing budget. NEBOSH IGC and Lean Six Sigma Green Belt; PMP in preparation.

CORE COMPETENCIES

Business Process Automation · Microsoft Power Automate (scheduled & event-driven flows) · Copilot Studio Agents · Applied Language Models (classification, summarisation, grounding) · Workflow & Approval Design · Advanced Excel & VBA · SharePoint · Microsoft Teams · Data Modelling & KPI Dashboards · Lean Six Sigma · Root-Cause Analysis · Compliance & Audit Trail Design · MLC 2006 · Workforce Planning & Manpower Forecasting · Crew Rotation & Travel Logistics · Budgeting · SAP · Workday · Crew Inspector

PROFESSIONAL EXPERIENCE

NAKILAT SVITZERWIJSMULLER (NSW) WLL — Ras Laffan, Qatar | Jan 2017 – Present
Nakilat–Svitzer joint venture providing towage, pilotage and marine support to QatarEnergy; fleet of 25+ vessels, 300+ seafarers.

Senior Administrator — Crewing Operations — May 2022 – Present

- Designed and delivered **twelve improvement projects now in use** across compliance, crew travel, procurement, dispatch, service requests and workforce analytics — using Power Automate, Copilot Studio and Excel/VBA on existing Microsoft 365 licences, with no budget or development resource.
- Automated **MLC certificate compliance follow-up end to end**: a scheduled flow chases joiners on an escalating cadence, writes every reminder back to source, escalates critical cases to a person, and issues daily and weekly reports — with a separate event-driven flow that surfaces crew replies to verifiers in Teams within minutes.
- Built and shipped **an AI agent in Microsoft Teams** answering live crewing questions — allocation, due-off dates, relievers, pending certificates and manning gaps by rank — grounded on tool queries rather than indexed documents, and tested against fabricated names and out-of-scope questions before release.
- Delivered an **email-to-ticket helpline** with model-assisted subject, summary and category, giving every employee request a tracked reference and a searchable history.
- Cut **monthly reporting effort by ~60%** by consolidating workforce, vessel and certification data into one governed model producing manning-gap, retention, FTE-utilisation and 12-month hiring-forecast views; quantified a 2026 requirement of 35 hires by rank.
- Reduced **procurement approval cycle time by ~60%** through a validated requisition workflow with a full requisition-to-order audit trail.
- Removed a recurring accommodation cost through root-cause analysis of 22 months of data, cutting **crew hotel nights from ~13 to ~3–4 per month (~70%)**.
- Direct crewing for **300+ multinational seafarers across 25+ vessels** — rotation and relief planning, mobilisation, MLC 2006 and client compliance, and preparation of the **FY2025 and FY2026 crewing and HR budgets** [QAR __ M].
- Supervise crewing coordinators, administrative staff and drivers; have **acted for the Crewing Manager** during periods of absence, holding decision authority on crew changes, reliefs and escalations.

Senior HR & Crewing Administrator — Jan 2022 – Apr 2022

- Coordinated crew logistics for 300+ personnel across two sites — transport, supply-vessel and helicopter bookings, and port-authority clearances — with no compliance findings.
- Reduced crew data processing time by ~60% by replacing manual trackers with structured, automated workbooks.
- Prepared vessel documentation, visa applications and training records to client and company standards.

HR & Crewing Administrator — Sep 2021 – Dec 2021

- Managed visa processing, gate-pass renewals and transport scheduling for crew movements in and out of the industrial city.
- Prepared and submitted vessel documentation and compliance reports to the Port Captain, securing timely approvals.

Administrative Assistant Mar 2020 – Aug 2021

- Maintained vessel and crew certification records and processed all gate-pass renewals without lapse, keeping vessels and crew cleared for port access.
- Coordinated crew and operational transport, improving vehicle utilisation and scheduling accuracy.

Seaman (Deck) Jan 2017 – Feb 2020

- Served on deck across mooring, cargo handling and deck maintenance operations — the operational grounding behind every system since.

PORTFOLIO PROJECTS (CASE STUDIES AT KINGLOMIBAO.GITHUB.IO)

- **Bosun (Copilot Studio agent)** — Teams agent answering live crewing questions from Power Automate lookups; grounded and failure-tested.
- **Helpline Ticketing** — email-to-ticket flow with AI subject, summary, category and priority; manual steps per request cut from six to three.
- **Certificate Compliance Chase** — escalating reminders with write-back and Teams alerts; certificates now arrive 15–30 days before joining.
- **Crew Movement Approvals** — authenticated approvals, automatic vessel notice and a daily PDF record; manual steps cut from seven to two.
- **Departure Ticket Tracker** — travel lifecycle with risk alerts and an auditable log; a missing reliever is caught days ahead.
- **Procurement Requisition Workflow** — validated requests with coding, routing and order tracking; approval cycle ~60% shorter.
- **Driver Scheduling Engine** — a month of transport generated in one action, with drivers assigned within shift and rest rules.
- **Night Shift Analysis** — 22 months of hotel data traced to a coverage gap; a new roster cut hotel nights from ~13 to ~3–4 a month.
- **Crewing Dashboard** — one model for manning gaps, retention, utilisation and hiring forecast; ~60% less reporting effort.
- **Also built:** Applicant Tracking System — VBA and Microsoft Forms screening and candidate email; ~40% faster hiring turnaround.
- **Live:** small-craft running hours and planned maintenance for nine vessels — daily readings and monthly job forms are in use, and the first load surfaced three overdue services.

EDUCATION

BSc Business Administration — Operations Management Graduating April 2027

Romblon State University · All coursework completed

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- **Lean Six Sigma Green Belt** — Council for Six Sigma Certification (2025)
- **NEBOSH International General Certificate** in Occupational Health & Safety — NEBOSH (2020)
- **Level 4 Diploma in Business Management** — Icon Training Centre
- **Foundation Diploma in Ship Management & Legal** — in progress
- **PMP (Project Management Professional)** — in preparation, exam targeted [month/year]
